

THE  
**HORNET**  
**PINCHLESS**  
**CHAIN SAW**

For

- FARMERS
- PULP OPERATORS
- WOOD CUTTERS
- CONTRACTORS

The returning chain is carried out of the cut. If the log settles back in the cut, the chain cannot become pinched and cause damage.

Order Now  
 AND BE SURE  
 OF PROMPT  
 DELIVERY

Material shortages are making it increasingly difficult to supply the demand for this great Hornet Pinchless. To be sure that you have your saw for fall and winter cutting, we recommend you contact your nearest Hornet Dealer now and order your saw while they're still in plentiful supply. If you do not know who your nearest Hornet Dealer is write to the company direct at the address below. We will supply his name as quickly as possible.

**HORNET'S LIKE A CREW  
WORKING FOR YOU**

**HORNET ENGINE AND  
TRANSMISSION POWERS  
BOTH TYPE CHAIN SAWS**

Now, for the first time, Hornet brings you a revolutionary development in chain saw manufacture . . . the interchangeable power unit. One heavy duty 2-cycle gasoline engine serves both straight and the new Pinchless chain saw attachments. In a matter of seconds you can transform a Hornet straight chain saw into the new Hornet Pinchless . . . has the same engine and transmission, but different attachments. You eliminate the costly expense of buying separate engine units to power two different types of cutting tools. In this way, you can afford two saws to meet various cutting requirements.

Wedge bar stops pinching

Chain returns out of cut

- **Introducing New, Easier "Plunge Cutting"**
- **For Faster, Handier Felling and Bucking**

This new Hornet Pinchless Chain Saw is really making a name for itself on farms and in pulpwood areas the country over . . . in fact, it's revolutionizing the pulpwood industry! This modern chain saw is the latest method of cutting hard, soft or frozen wood without pinching. You work with ease, using either the front or bottom cutting bar to fell and cross cut faster and easier than ever before possible.

With the front cutter, you can buck logs without lifting the saw in and out of the cut and fell trees at ground level. This exclusive Hornet "plunge cutting" technique completes the cut in seconds. The wedged-shaped guideplates prevent timber from settling back and jamming the chain. The new Hornet is so lightweight you'll be using it all day. Its high-speed engine is bubbling over with power. A new Hornet is waiting for you!
