AIR INJECTION

HUSQVARNA 365. FULL

The **Husqvarna 365** has been developed for those people who are dependent, day in, day out, on an advanced and very powerful chain saw. In other words, a world-class saw. Easy to start, reliable, flexible to handle and simple to maintain after a day's work.

Husqvarna 365 incorporates a number of innovative design features which make a day's work more comfortable for you and less wearing on your saw. Intelligent solutions, which are the result of almost 40 years of chain saw product development and close co-operation with professional users across the world. Husqvarna's exclusive features and qualities have set the standard for other manufacturers, and have also formed the basis of authoritative requirements in numerous countries.

LOWVIB

The efficient vibration damping system protects your hands from harmful vibrations.

AIR INJECTION

The unique system that cleans the air before it is drawn into the engine enables you to work for longer periods before having to clean the air filter.

DIVIDED AIR FILTER COVER

The air filter and spark plug can be easily reached without tools.

RELIABLE CHAIN BRAKE

The inertia activated chain brake is designed to be effective in any working position, the chain stops in a fraction of a second if a kickback occurs.

POWERFUL ENGINE INCORPORATED IN A LIGHT SAW BODY

With a displacement of 65 cm³ the engine develops a full 4.6 hp. Despite this power, the saw body weighs no more than 6.0 kg.

OF SMART SOLUTIONS.

IGNITION SYSTEM

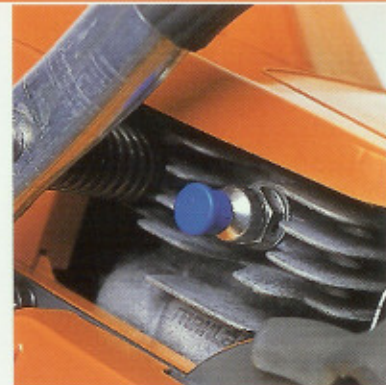

High ignition energy with ignition adjustment produces an easy start and more stable idling.

VIBRATION DAMPED CARBURETTOR

Reduces vibrations considerably and extends the carburettor's life. The carburettor is also protected from the heat which is produced in the cylinder. This ensures that the saw is extremely easy to start—even in a warm climate.

COOLFLO CLUTCH

Ventilated clutch with a patented deadlocked clutch drum and gear wheel.

SMART START

Husqvarna Smart Start is a decompression valve which markedly decreases the resistance in the starting handle when you start the saw. Light pressure on the blue button reduces the compression at the moment of starting. The valve closes automatically when the engine starts, and you are able to begin sawing as normal. The advantages with Smart Start are based on strain-avoidance, both for you and the starting mechanism.

TOP PERFORMANCE. DAY IN, DAY OUT.

Husqvarna 365 is the latest innovation in our product development which puts people first. By focusing on qualities such as **performance, reliability, ergonomics** and **safety**, we produce the finest, world-class saws.

Husqvarna 365 is a hard-working and durable chain saw, with a very high capacity. It is an unbeatable tool in the forest, both to work with and to service. The saw incorporates features which reduce the likelihood of unintentional stoppage and which increase productivity, e.g. Air Injection, which enables you to saw, literally, in a cloud of saw dust without the air filter becoming clogged up.

A **robust** saw, which makes the working day that little bit **easier**, and one which you can depend upon—day after day, year after year...

You can rely on a Husqvarna 365. For a long time!

Air injection markedly reduces the amount of saw dust and particles which reach the air filter.

AIR INJECTION

Husqvarna Air Injection is a unique system which cleans the engine intake air. Using centrifugal force, the engine fan separates dirt and other particles from the engine intake air before it reaches the filter. You can work harder and longer before cleaning the filter. The engine receives cleaner air and, as a result, it works cleaner and more efficiently. Likewise, wear and tear on the engine's movable parts is also reduced.

THE DIAGRAM SHOWS THE RELATIVE IMPROVEMENT IN REDUCING THE LEVELS OF CUTTING VIBRATIONS

Vibrations are not good—neither for the saw, nor for the user. As such, for many years, we at Husqvarna have been working purposefully to decrease the vibration levels in our chain saws.

We have **minimised the weight** of all the moving parts in our engines. This does not only lower the vibrations from the engine, it also reduces wear and tear inside the engine. Fuel consumption is reduced, thus resulting in a **better fuel/work ratio**.

Husqvarna LowVib, our effective vibration damping system, deserves a whole chapter for itself. It effectively **protects** your hands from fatigue-causing vibrations which, in the long term, can be harmful and lead to “white fingers” which occur when the blood circulation in the hands is deteriorated.

By using the Husqvarna 365, you work **more effectively** and you are able to work for longer.

LESS VIBRATIONS MEANS MORE POWER FOR YOU AND YOUR SAW.

LOWVIB

Husqvarna LowVib is a vibration damping system where the handle unit is insulated from the saw's vibration generating components. Vibrations are efficiently absorbed by powerful and durable steel springs. Your hands and arms receive minimal fatigue-causing vibrations from the engine and the cutting equipment. The stop button is located in the vibration damped part of the saw, this reduces the stress it receives and also increases the saw's reliability.

The powerful steel springs are very durable and their performance is not affected by lubricant or fuel spillage.

TOP PERFORMANCE. DAY IN, DAY OUT.

Husqvarna 365 is the latest innovation in our product development which puts people first. By focusing on qualities such as **performance, reliability, ergonomics** and **safety**, we produce the finest, world-class saws.

The engine receives cleaner air and, as a result, it works cleaner and more efficiently. Likewise, wear and tear on the engine's movable parts is also reduced.

OUR ERGONOMIC DESIGN INCREASES YOUR PRODUCTIVITY.

Husqvarna 365 is developed according to the principle of putting people first. Against this background, we have made the saw as **easy to handle** and as **ergonomically designed** as possible.

Firstly, the saw is **light in weight** and has a high centre of gravity. This provides the saw with **excellent balance** and makes it very flexible to work with. You can feel how easy it is to use the saw, especially when carrying out limbing work. Here the saw's **slim design** lets you work with it close to your body, whilst ensuring that you avoid straining yourself in uncomfortable working positions. The **front handle** is angled so that your wrists are able to work at a natural angle. This, together with the vibration damping system, Husqvarna LowVib, makes the saw easy and flexible to use.

The saw's design and shape mean that you can work with it in a more relaxed and natural way. You can work for longer and more safely. Your productivity is increased and you feel better—even after all the work has been done.

HIGH CENTRE OF GRAVITY

The centre of gravity is located high up in the slim body of the saw. This makes the saw smooth and easy to handle during limbing work. You are always in good control of the saw.

ANGLED FRONT HANDLE

The front handle is angled so that you can work with your wrists at a natural angle.

SIMPLE MAINTENANCE INCREASES THE SAW'S LIFE.

Husqvarna 365 is designed to be easily maintained. We are in no doubt that continuous maintenance increases the saw's reliability and working life. It works more smoothly and you work more efficiently. Therefore, we have made it as easy as possible for you to carry out the daily maintenance needs on your saw.

For example, the air filter cover can be removed within a few seconds, without using any tools. Even chain and guide bar changes can be done almost effortlessly.

Everything is easy to take care of on a Husqvarna 365.

NEW AIR FILTER COVER

The new air filter cover is released by two catches. This also uncovers the spark plug. When you release the steel clip, the air filter can be lifted out. All within a few seconds, using only your hands.

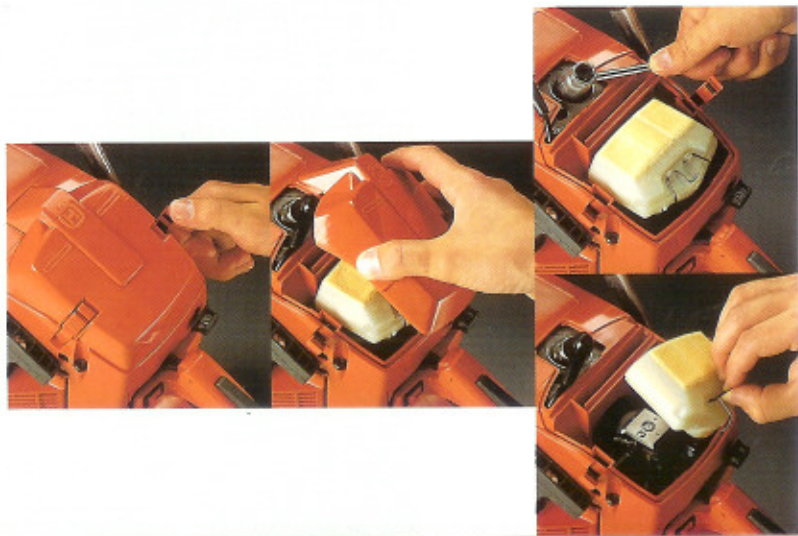

HUSQVARNA UNIVERSAL KEY

With the universal key (which you receive with the chain saw), you are able to assemble, dismantle and regulate: the guide bar and chain, the cylinder cover, the spark plug, the oil pump, the starting unit and the open circuit.

ALWAYS CLOSE AT HAND

Husqvarna is found in over 100 countries, and has more than 16,000 recognised dealers. They give professional advice and tips on how to get the best use out of, and how to look after, your chain saw. Moreover, our dealers will provide the service which you require, and they also stock original Husqvarna spare parts, accessories and consumption materials.

Husqvarna 365. Made for professionals. By professionals.

CYLINDER VOLUME	65 cm ³
POWER	3.4 kW/4.6 hp
SPEED AT PEAK POWER	9,300 rpm
TANK CAPACITY, FUEL/OIL	0.77/0.42 l
WEIGHT, SAW BODY	6.0 kg
CHAIN PITCH	3/8"
RECOMMENDED BAR LENGTH	15" - 28"
VIBRATION, FRONT/REAR	3.6/3.5 m/s ²
NOISE, POWER/PRESSURE	109/102.5 dBA

Husqvarna 365 has been developed to be a reliable and hard-working companion for those people who are dependant on their chain saw, day in, day out. With smart design solutions, such as Husqvarna LowVib, Husqvarna Air Injection and Smart Start, the saw is extremely flexible and easy to work with. You work more effectively and you are able to work for longer.

You can rely on a Husqvarna 365. For a long time!
