

McCULLOCH

McCulloch Chains, Bars and Accessories

Quality Equipment Every Chain Saw Deserves

At McCulloch, we're committed to building quality into every product we produce. That's why it makes good sense to insist upon only genuine McCulloch replace-

ment parts, maintenance tools, custom lubricants and safety accessories. Give your chain saw the quality it deserves and put McCulloch to work for you.

SAW MAINTENANCE TOOLS & ACCESSORIES

SCRENCHES

This all purpose tool is a screwdriver, bar bolt wrench, and spark plug wrench all in one. Use it for setting proper chain tension, installing spark plugs, and assembling and maintaining your saw.

SPARK PLUG

McCulloch spark plugs are available for all models of McCulloch saws, as well as for a variety of other brands. Maintaining clean plugs allows for better starting and running conditions for your chain saw.

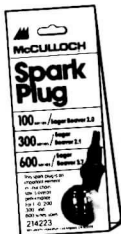

AIR FILTERS

These air filters keep chain saw engines free of dust and dirt. For best performance, filters should be inspected and cleaned frequently.

SPROCKET AND DRUM ASSEMBLIES

For smoother cutting and freer chain operation, rely on precision-made drive sprockets from McCulloch. All sprockets are constructed from high quality hardened steel to provide long life and resistance to wear. McCulloch sprockets are designed for precise match to drive links. This reduces sag, chatter, and jump. McCulloch sprockets also have perfect pitch and roundness for high production cutting.

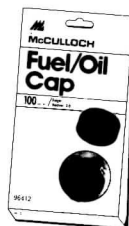

SPARK ARRESTER SCREEN KITS

Offer you an extra measure of protection from sparks. Meet all known federal and state forestry regulations.

FUEL/OIL CAPS

Replacement fuel/oil caps for McCulloch saws.

BUCKING SPIKES

Add these bucking spikes to your chain saws for easier cutting control. Allows you to gain leverage and maintain a cutting position when using your saw.

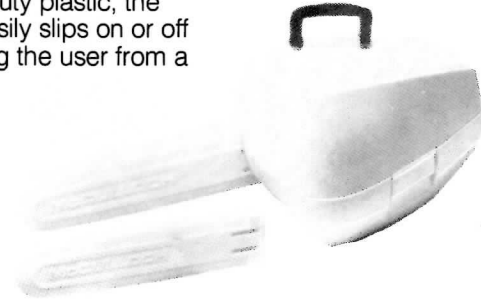

CARRYING CASES

Both the carrying case and scabbard are made of heavy duty plastic for long life and rugged use. The case is double-walled for maximum protection of the saw. The carrying case design permits the bar scabbard to separate from the main body of the case. When the chain saw is lifted out of the case, the bar scabbard remains in its protective position on the bar.

Four types available to fit most McCulloch chain saws.

BAR SCABBARD

Made of heavy duty plastic, the bar scabbard easily slips on or off the bar protecting the user from a sharp chain.

McCULLOCH CUSTOM LUBRICANTS

McCULLOCH 2-CYCLE 40:1 CUSTOM LUBRICANT

McCulloch Custom Lubricant is specially blended, tested and proven best for McCulloch chain saws and other high performance 2-cycle engines. It is a premium blend of oil, ashless additives and a special solvent to improve mixability with gasoline at all temperatures.

CHAIN, BAR AND SPROCKET OIL

Special additives make McCulloch Chain, Bar and Sprocket Oil the ideal lubricant for all cutting conditions. Extends bar, chain and sprocket life while it reduces cutting friction.

McCULLOCH WEDGES

These durable plastic wedges help prevent chain saws from binding in the cut. It also helps control the direction of tree fall when felling a tree.

For all McCulloch saws.

McCULLOCH REPLACEMENT BARS

Durable and economical, McCulloch bars are suitable for the casual and semi-professional user.

SPROCKET TIP BARS

Ranging in size from 10" to 20", the McCulloch line of sprocket tip bars feature:

- Increased cutting speed — up to 20% faster than conventional solid bars.
- Longer life — sprocket tip "lifts" chain from the bar rails at nose section, eliminating excessive bar wear.
- Low Maintenance — sprocket tip bearings are prelubricated so that no initial maintenance is required.

SPEED MAC REPLACEABLE SPROCKET NOSE BAR

The Speed Mac bar line, ranging in size from 16" to 38", features tough, long wearing bars designed for the cutter seeking the best cutting combination. The replaceable sprocket nose feature allows the user to inexpensively change the nose section after extended use.

McCULLOCH SOLID BARS

Available in sizes to fit a wide range of chain saws, McCulloch solid bars are built to be dependable and long lasting.

LOW KICKBACK SAW CHAIN LOOPS

McCulloch Low Kickback saw chain is now packaged in new attractive bubble pack convenient for easy display. Each bubble pack contains premium quality Low Kickback saw chain, installation/maintenance instructions, model selection and identification card.

GREASE GUN

This tool* is specially designed for lubricating chain saw sprocket tip bars. It's made of sturdy metal and is refillable. For best performance, bar sprocket tip should be lubricated after every hour of heavy use.

For all McCulloch saws.

*Grease not included.

BARS & BAR/CHAIN COMBINATIONS

CONSUMER PACKAGED BARS

Lightweight laminated and laminated sprocket tip bars which are skin packed and identified as to bar length, bar style and appropriate consumer chain saw model.

BAR AND CHAIN COMBINATIONS

Both the 14" and 16" kit feature a Low Kickback saw chain and laminated sprocket tip bar combination which can either replace your current cutting attachments or increase your chain saw's cutting capacity and improve performance.

CHAIN MAINTENANCE TOOLS

McCULLOCH FILE-PLATE: COMBINATION SHARPENING GUIDE AND DEPTH GAUGE TOOL

Chain maintenance is important with any saw chain. The file-plate makes it easy by fitting over the cutter and giving a foolproof guide to filing at the correct angle to ensure maximum cutting performance. File-plate is designed to also fit over the depth gauges and makes it simple to properly lower them as the cutters are filed back thus delivering the original cutting performance throughout the life of the chain.

FILE GUIDES

These precision file guides assure the correct filing, angle, easier and more accurate sharpening for smoother, faster cutting chain.

ROUND FILES

McCulloch round files are made of extra-tough steel with a hardness of Rc 65 for faster, easier sharpening. These files will sharpen chain of all makes and types.

LUBE GUN

All purpose lubricant for guide bars and chain saw power units. Special tip included for application of grease to sprocket tip.

Safety is a standard, not an option.

McCulloch was the first chain saw manufacturer to offer important safety features as standard equipment. These include CHAIN BRAKE™ which, when activated, stops a moving chain in a fraction of a second... plus low kickback chain, muffler shield, safety trigger, throttle latch and chain catcher.

**CHAIN
BRAKE**

While operating gas-powered products in grass, brush, or forested land, follow these basic guidelines:

- Keep spark arrester screen properly maintained at all times. Inspect and clean the screen after every 5 hours of use, or more frequently if required. (In addition to increasing the chances of your equipment starting a spark-activated fire, an improperly maintained screen will result in a loss of engine power and improper exhaust system operation.)
- Keep a fire extinguisher and shovel close by whenever cutting in fire-prone areas.
- Equip your older saw with a spark arrester screen kit, which is available at your nearest McCulloch dealer (models and stock numbers are included in your chain saw packaging literature).
- Check with the U.S. Forest Service, your local state agency, or the Canadian Provincial Forestry Agency for additional information on spark arrester screen regulations in your area.

All McCulloch chain saws and string trimmers are equipped with a U.S. Forest Service-approved muffler system. This muffler system provides exhaust temperature control, and limits exhaust particle emission.

McCulloch realizes the grave consequences of forest fires and the irreparable damage they cause. That is why we have taken steps to install important fire safety equipment such as the fully shielded muffler and spark arrester screen on all of our gasoline-powered outdoor products.

**Join us in our fight against forest fires
and help make fire safety a full-time job.**
